## S&P - Índices de Renta Variable de América Latina: Comentarios

América Latina cerró el 2017 de manera muy positiva. En la edición anual de este informe examinaremos el desempeño de índices regionales y de países durante 2017, así como de aquellos países quienes obtuvieron los mejores resultados y los que quedaron rezagados.

Los rendimientos anualizados de América Latina, según la medición del S&P Latin America BMI (el índice amplio de la región) y del S&P Latin America 40 (el índice de alta capitalización), han superado incluso a los del S&P 500 y del S&P Global 1200, que mide el desempeño de las 1,200 empresas de mayor tamaño y liquidez en todo el mundo. Los índices regionales y de países de América Latina ya presentan dos años consecutivos con rendimientos positivos de doble dígito, situando sus resultados durante el periodo de tres años en territorio positivo. Aún queda camino por recorrer antes de que los rendimientos de cinco y diez años también pasen a terreno positivo, pero la brecha se está cerrando.

A pesar de los desafíos políticos en Brasil, las elecciones en Chile, los desastres naturales en México y las circunstancias extraordinarias de corrupción empresarial que afectaron a la región por completo, todos los mercados latinoamericanos tuvieron un desempeño excepcional en 2017, según se vio reflejado en sus respectivos índices: el S&P Brazil BMI, el S&P Chile BMI, el S&P/BMV IRT de México, el S&P Colombia BMI y el S&P/BVL Peru General. En particular, los tres mayores mercados de la región tuvieron el impacto más significativo sobre los rendimientos. Brasil, que representa casi 58% del S&P Latin America BMI, tuvo un rendimiento anual de 26.1%. Chile, el tercer mayor mercado de la región según ponderación, alcanzó un rendimiento anual de 45.2%. México, el segundo mercado de mayor tamaño en América Latina y que representa casi 24% del índice, generó un sólido rendimiento de 11% durante 2017. Argentina fue el monstruo de la región (en el buen sentido). Dado que este mercado es clasificado como mercado frontera y no como emergente, en la actualidad no se considera parte del S&P Latin America BMI. Sin embargo, cabe mencionar que su desempeño durante el 2017 fue sobresaliente, generando un rendimiento de 73.1% en dólares (USD) y de 106% en pesos argentinos (ARS).

¿Entonces, cuáles fueron los motivos de este éxito? Sobre la base de datos históricos, América Latina fue la última región en alcanzar los resultados de otros mercados globales. Una percepción positiva de los inversionistas a nivel global, una buena valuación de las empresas, junto con varios otros factores financieros acomodaticios (como baja volatilidad del mercado, según la medición del VIX®, bajas tasas de interés, baja inflación) y el aumento en el precio de *commodities* (como oro y petróleo) contribuyeron al buen desempeño de los mercados durante el año pasado. En América Latina, solo 58 de las 285 empresas del S&P Latin America BMI presentaron rendimientos negativos en el periodo de un año. Esto significa que 85% de las empresas que forman parte del índice generaron rendimientos positivos. Al cierre de 2017, las 28 acciones principales, que representan 50% del índice, tuvieron un promedio de rendimiento anual cercano al 36%.

El crecimiento económico se ha reactivado en América Latina, según datos del tercer trimestre de 2017. El PIB de la región se ha expandido a un mayor ritmo que el primer trimestre de 2014,<sup>1</sup> dejando en el pasado la recesión del año anterior. Si bien los analistas esperan que las economías de la región continúen creciendo, existe cierto grado de duda en torno a estas proyecciones, debido a la importancia de las elecciones que se avecinan en Brasil, Colombia y México. Los nuevos gobiernos en estos países pueden propiciar u obstaculizar las políticas económicas necesarias para continuar con la expansión de la región. Si bien parecen estar confiados, los participantes del mercado se están tomando un momento para ver cuál será el enfoque para este 2018. Sin dudas este será un año interesante para la región.

The S&P MILA Pacific Alliance Midcap, Smallcap and Midsmallcap Indices were launched October 3, 2016.

All information presented prior to the index launch date is back-tested. All information presented prior to an index's Launch Date is hypothetical (back-tested), not actual performance. The back-test calculations are based on the same methodology that was in effect on the index Launch Date. Complete index methodology details are available at [www.spdji.com](http://www.spdji.com).

S&P Dow Jones Indices defines various dates to assist our clients in providing transparency. The First Value Date is the first day for which there is a calculated value (either live or back-tested) for a given index. The Base Date is the date at which the Index is set at a fixed value for calculation purposes. The Launch Date designates the date upon which the values of an index are first considered live: index values provided for any date or time period prior to the index's Launch Date are considered back-tested. S&P Dow Jones Indices defines the Launch Date as the date by which the values of an index are known to have been released to the public, for example via the company's public website or its datafeed to external parties. For Dow Jones-branded indices introduced prior to May 31, 2013, the Launch Date (which prior to May 31, 2013, was termed "Date of introduction") is set at a date upon which no further changes were permitted to be made to the index methodology, but that may have been prior to the Index's public release date.

Past performance of the Index is not an indication of future results. Prospective application of the methodology used to construct the Index may not result in performance commensurate with the back-test returns shown. The back-test period does not necessarily correspond to the entire available history of the Index. Please refer to the methodology paper for the Index, available at [www.spdji.com](http://www.spdji.com) for more details about the index, including the manner in which it is rebalanced, the timing of such rebalancing, criteria for additions and deletions, as well as all index calculations.

Another limitation of using back-tested information is that the back-tested calculation is generally prepared with the benefit of hindsight. Back-tested information reflects the application of the index methodology and selection of index constituents in hindsight. No hypothetical record can completely account for the impact of financial risk in actual trading. For example, there are numerous factors related to the equities, fixed income, or commodities markets in general which cannot be, and have not been accounted for in the preparation of the index information set forth, all of which can affect actual performance.

The Index returns shown do not represent the results of actual trading of investable assets/securities. S&P Dow Jones Indices LLC maintains the Index and calculates the Index levels and performance shown or discussed, but does not manage actual assets. Index returns do not reflect payment of any sales charges or fees an investor may pay to purchase the securities underlying the Index or investment funds that are intended to track the performance of the Index. The imposition of these fees and charges would cause actual and back-tested performance of the securities/fund to be lower than the Index performance shown. As a simple example, if an index returned 10% on a US \$100,000 investment for a 12-month period (or US \$10,000) and an actual asset-based fee of 1.5% was imposed at the end of the period on the investment plus accrued interest (or US \$1,650), the net return would be 8.35% (or US \$8,350) for the year. Over a three year period, an annual 1.5% fee taken at year end with an assumed 10% return per year would result in a cumulative gross return of 33.10%, a total fee of US \$5,375, and a cumulative net return of 27.2% (or US \$27,200).

This document does not constitute an offer of services in jurisdictions where S&P Dow Jones Indices LLC, Dow Jones, S&P or their respective affiliates (collectively "S&P Dow Jones Indices") do not have the necessary licenses. All information provided by S&P Dow Jones Indices is impersonal and not tailored to the needs of any person, entity or group of persons. S&P Dow Jones Indices receives compensation in connection with licensing its indices to third parties. Past performance of an index is not a guarantee of future results.

It is not possible to invest directly in an index. Exposure to an asset class represented by an index is available through investable instruments based on that index. S&P Dow Jones Indices does not sponsor, endorse, sell, promote or manage any investment fund or other investment vehicle that is offered by third parties and that seeks to provide an investment return based on the performance of any index. S&P Dow Jones Indices makes no assurance that investment products based on the index will accurately track index performance or provide positive investment returns. S&P Dow Jones Indices LLC is not an investment advisor, and S&P Dow Jones Indices makes no representation regarding the advisability of investing in any such investment fund or other investment vehicle. A decision to invest in any such investment fund or other investment vehicle should not be made in reliance on any of the statements set forth in this document. Prospective investors are advised to make an investment in any such fund or other vehicle only after carefully considering the risks associated with investing in such funds, as detailed in an offering memorandum or similar document that is prepared by or on behalf of the issuer of the investment fund or other investment product or vehicle. S&P Dow Jones Indices LLC is not a tax advisor. A tax advisor should be consulted to evaluate the impact of any tax-exempt securities on portfolios and the tax consequences of making any particular investment decision. Inclusion of a security within an index is not a recommendation by S&P Dow Jones Indices to buy, sell, or hold such security, nor is it considered to be investment advice. Closing prices for S&P Dow Jones Indices' US benchmark indices are calculated by S&P Dow Jones Indices based on the closing price of the individual constituents of the index as set by their primary exchange. Closing prices are received by S&P Dow Jones Indices from one of its third party vendors and verified by comparing them with prices from an alternative vendor. The vendors receive the closing price from the primary exchanges. Real-time intraday prices are calculated similarly without a second verification.
